Carbide-tipped ground band saw blade with negative bevel for cutting materials with particularly hardened and tempered surfaces.

The specially ground multi-chip geometry with negative rake angle ensures optimum chip distribution with significantly increased cutting performance and a longer service life in all workpiece dimensions.

Carbide

Product Features

Carbide Tipped negative rake angle

Multi Chip Geometry ground

Areas of Application

Surface hardened

Solid Material large

Solid Material small

Product Advantages

Wear Resistance

Cost Reduction

MATERIAL GROUP

2

Stainless steel
Hardened steels
Heat resistant steel
Steel and non-ferrous alloys
Titanium and Titanium alloys
